

Built for High-Demand Facility Maintenance

High-volume application for cleaning, sanitation, and targeted pest control

Shutdown and deep cleaning cycles are underway across institutional and commercial facilities—including schools, universities, and other high-traffic environments—driving increased demand for high-volume chemical application across floors, restrooms, waste areas, and sanitation work where efficiency, coverage, and consistency directly impact job completion.

Seasonal pest activity in these same environments also increase demand for targeted space treatments, where cold fogging improves coverage in hard-to-reach areas.

This creates a need for reliable application equipment that delivers consistent output and efficiency under demanding facility conditions.

From chemical sprayers to cold fogging systems, the focus is on efficient, consistent application across facility maintenance tasks.

SOLUTIONS THAT DELIVER

EFFICIENCY

High-volume application reduces time and labor

COVERAGE

Consistent output ensures uniform results

RELIABILITY

Built to perform in demanding facility conditions

EQUIPMENT BUILT FOR EVERY TASK

Explore the complete line of SOLO sprayers and our battery-powered cold fogger to find the right solution for your facility maintenance needs.
